

ABSTRACT OF THE DISCLOSURE

The present invention provides a data input form generation system capable of generating a data input form which can easily used to construct a database. A data input form generation system has a data input form acceptance unit for accepting input of a data input form including a table, a table extraction unit for extracting the table from the data input form accepted by the data input form acceptance unit, a database defining unit for defining a database based on the table extracted by the table extraction unit, and a data input form generation unit for generating a database-related data input form related with the database by relating the table included in the data input form accepted by the data input form acceptance unit with the database defined by the database defining unit.
